September 2008 - March 2009

Post-graduate Internship (1000 hours) at "C. Mondino Neurological Foundation", Neuropsychology lab - Pavia (Italy). Work-site supervisor: Dr. Elena Sinforiani

October 2007 - September 2008

University tutor in "Cognitive and Experimental Psychology training" and Professor assistant (700 hours) at Faculty of Philosophy and Letters, Department of Psychology - University of Pavia (Italy). Cognitive tutoring granting a support in using databases and medical scientific web magazines, writing scientific reports, organizing psychological experiments. Work-site supervisor: Prof. Tomaso Vecchi

October 2006 - July 2008

M.Sc. in "Psychology". Neuroscience curriculum, 110/110 with honors

Experimental Graduation Thesis:

"Stress assignment in reading words in normal readers and dyslexic patients with left hemisphere damage" liaised with the University of Pavia, University of Milan Bicocca and Maugeri Foundation Hospital in Pavia.

Thesis Directors: Prof. Alessio Toraldo and Prof. Gabriella Bottini

The project derived from Max Coltheart' studies on English linguistic processing and had the aim to analyse the specific process of stress assignment in reading words and non-words (invented words without a specific stress assignment). The study presented data on two experiments. The first one concerned a sample of 27 Italian normal readers who participated in a reading task including words and non-words (880 items overall). Results showed that stress assignment is influenced by lexical information even when the material is non-lexical (non-words). In the second experiment, five Italian dyslexic patients with left hemisphere damage participated in two different tasks: a reading task including words and non-words (a total of 124 items) and a picture naming task (51 pictures). Results showed a simple dissociation between stress assignment and phonological assignment. This result is consistent with the idea that phonology is at least partially extracted via grapheme-to-phoneme conversion while stress extraction involves partial activation of the lexical route.

November 2005 – May 2006

Pre-graduate Internship (1000 hours). C. Mondino Neurological Foundation, Cognitive-Behavioural psychology lab – Pavia (Italy). Work-site supervisor: Dr. Annapia Verri

- Ability to use clinical **psychological tests** (administration and scoring tests for the evaluation of the emotional state and personality and collaboration in clinical interviews in the lab)
- **Psychological support** to inpatients and outpatients

July 2003

High School languages diploma at A.Cairolì Institute in Pavia

Mark: 100/100

Personal skills and competences

Mother tongue
